PROFILE

A seasoned business applications developer specializing in the Microsoft Power Platform, where I create impactful low-code solutions. I excel in the Microsoft Power Platform and also bring valuable experience in customizing and integrating Dynamics 365 Finance & Operations. I have a strong record of successfully delivering projects for manufacturing clients, along with extensive experience in designing and developing solutions for Professional Services Automation and Independent Software Vendor products.

PROFESSIONAL EXPERIENCE

COPILOTS & AGENTS

- Played a key role in the development of the proprietary “myTime App” using Microsoft Copilot Studio, Power Automate, and Azure Bot Framework Composer.
- Designed and deployed Copilot agents to streamline employee productivity and automate proposal generation workflows using Agent Flows, AI Builder, and Microsoft connectors.
- Enhanced conversational experiences by implementing Adaptive Cards and event driven triggers.
- Solid understanding of orchestration techniques, dynamic chaining, entity handling, and plugin action integrations.

BUSINESS APPS:

- Extensive experience in building low-code business applications with Power Apps, Power Automate, Power BI, Dataverse, Office Scripts, Client API (JavaScript), and XRM Toolbox.
- Maintained and supported enterprise-grade internal applications, including both Canvas and Model-Driven apps.
- Led the implementation of Application Lifecycle Management (ALM) practices within the team using Power Platform Build Tools, Azure DevOps pipelines, and CI/CD automation via custom JSON templates

ERP CUSTOMIZATION & INTEGRATION

- Proficient in extending Dynamics 365 Finance & Operations through Code Extensions, Chain of Commands, Event Handlers, and Method Overriding.
- Customized and developed AOT objects, including Tables, Forms, Workspaces, SSRS Reports, Menus, and Menu Items.
- Integrated Power Platform with Dynamics 365 using OData entities, Custom Services, and the Data Management Framework (DMF), with automation support through Power Automate.
